

2019 Chemistry REU Program at James Madison University

The Department of Chemistry and Biochemistry at JMU hosts an REU site that integrates Deaf, hearing and sign language interpreting students in chemical research. Participants include students and faculty from JMU and outside institutions that serve Deaf students or institutions that do not have extensive research infrastructure. JMU faculty members provide research opportunities in all major sub-disciplines of chemistry. In addition, students participate in a series of professional development activities aimed at enhancing effective science communication with other chemists, scientists in other disciplines, the public and those with communication disorders.

We are now accepting undergraduate student applications for our summer 2019 program for the following positions:

- **Undergraduate Research Associates in Chemistry**
 - ten-week positions (May 20 – July 26)
 - open to students majoring in chemistry or a related science discipline
- **Undergraduate ASL Interpreting Students**
 - ten week ASL student interpreter positions (May 20 – July 26), and
 - two week ASL student observing positions
 - open to current undergraduate students training to be ASL interpreters, or with experience in ASL
- Students in ten week positions (Chemistry & ASL interpreting students) will receive a stipend for full participation. ASL observers in two week positions will receive a per diem. Housing is available for all positions.
- **Chemistry Faculty** interested in a visiting summer research position (sometimes paired with a student from their home institution) are also encouraged to apply.
